Management (MG)

Job cost, profit, lots to close and labor against budget, for the people who run the company.

1. What this module is for

Management is a read-only reporting module for owners and managers. It answers questions such as: which lots are open, which lots are ready to close, how much did each job, builder, phase or superintendent cost against the bid and the budget, how much was billed, and what profit was made. Nothing is entered or changed here. Access is controlled per login: only users with the MG permission flag see this module.

2. How it connects to other modules

Needs data from

MODULE	WHAT IT USES	WHY
Job setup	Builders, jobs, phases, lots and packs on each lot	The basis of every report
Plan management	Plans, contracts, pack budgets and materials	The "PM budget" and contract columns, and lot budgets
Estimating	The bid linked to a contract (plans, packs, materials)	The "Bid" columns in the job cost report
Payroll	Labor paid per lot and employee	Labor cost, "Labor paid to lot", "Labor paid vs budget" and the "no labor in 60 days" rule
Inventory control and job cost	Material posted to lots	Material cost, "Material posted to lot" and counter material
Accounts receivable	Posted invoices and invoice lines	The "Billed" amount and gross profit
Database maintenance (lists)	Divisions, stages, types of work, superintendents, statuses and similar lists	Pick-lists and labels

Feeds data to

MODULE	WHAT IT GIVES	WHEN
None	Management only reads; it does not save anything to any module	-

Where it sits in the work flow

Management sits at the end of the chain. Estimating prepares the bid, Plan management sets the budget, Payroll and material posting record the real cost, and Accounts receivable records what was billed. Management compares all four so the office can decide which lots to close and how jobs are performing.

3. Screens (tabs) in this module

SCREEN / TAB	WHAT IT IS FOR	WHAT YOU CAN DO THERE
Overview	Snapshot of open work	See three cards (Open lots, Ready to close, Finished in the last year), a table "Open lots by start month" by division where each number opens the list, and a "Lot info detail" box to open a lot by its lot id. "Job cost report" button at top right
Job cost	Estimate vs budget vs actual vs billing	Choose the finished-date range, burden and filters, press "Process job cost", switch the grouping, export to Excel (CSV) or print
Reports	Page of report cards	Pick a card; only the filters that report needs appear below it; the report opens underneath

4. How the data entry forms work

Management has no screens where records are added or changed. It has two screens with filters that run reports.

Job cost filters

- When you use it: to see cost and profit for lots finished in a period.
- Fields, required first: Finished from , *To* , Labor burden % (25 by default). Optional: Division and Builder pick-lists (All by default).
- Step by step: set the dates and burden, press "Process job cost". The grouping buttons switch the same numbers between by builder / division, by builder, by job, by phase, by job / lot, by builder / lot and by super. At the lot level, clicking a row opens "Lot info detail".
- What is checked: From and To must both be given and From must not be after To; burden must be between 0 and 200.
- What gets saved: nothing. The figures are worked out live each time you press the button, so there is no stored job cost to refresh.

Report filters (Reports tab)

- When you use it: to run any of the twelve report cards.
- Fields: only those the chosen report needs. Builder, Job and Lot are linked pick-lists: choose the builder first, then its jobs appear, then the lots of that job. Division and Type of work are pick-lists. From, To and "As of" are dates; Burden % is a number; Employees is a searchable check-list with a Clear button.
- Step by step: click a card; dates and burden are pre-filled where needed (From one year ago, To today, burden 25). Until all the required filters are chosen the page tells you what is missing (for example "Choose a builder, a division").
- Safeguards: nothing is saved; filters are kept in the page address so you can bookmark or share a report.

5. Reports

Every report page has a Print button. A CSV button is on the reports marked below.

REPORT	WHAT IT SHOWS	FILTERS YOU CHOOSE FIRST	PRINT / EXPORT
Job cost (Job cost tab)	For lots finished in the range: bid estimate and contract, PM budget and contract, actual labor, material, job cost, billed, gross profit and GP %, with four summary cards	Finished from, To, Burden %, optional Division and Builder; grouping buttons	Excel (CSV), Print
Lots ready to close	Open lots started 4+ months before the date with no labor paid in the last 60 days	As of date; tick "Group by superintendent" if wanted	Print, CSV
Lot info detail	Lot, job and phase details with Packs, Job cost and Billing sections	Builder, Job, Lot	Print
Lot budget vs job cost	Budget from the packs against job cost by cost code, stage and work	Builder, Job, Lot, Burden %	Print
Labor paid to lot	Every payroll line on the lot with piece and hourly pay	Builder, Job, Lot; From and To optional	Print, CSV
Material posted to lot	Material charged to the lot by work, stage and class	Builder, Job, Lot	Print
Counter material posted to lot	Counter (non-pack) material with the reason	Builder, Job, Lot	Print
Labor paid vs budget - open lots	Piece and hourly pay against the labor budget on a builder's open lots	Builder, Division	Print, CSV
Labor paid vs budget - employee	Lots where the chosen employees were paid in the period, with the budget	Division, From, To, Employees	Print, CSV
Job cost by type of work	Estimate vs actual for one type of work on lots finished in the period	Builder, Type of work, From, To	Print, CSV
Option packs scheduled by job	Option packs on lots started in the period, per job	Builder, Division, From, To	Print, CSV
Open lots per period	Lots started in the period that are still open	Division, From, To	Print, CSV
Job cost packs no value	Packs with no contract value on lots finished in the period	From, To	Print

6. Action buttons

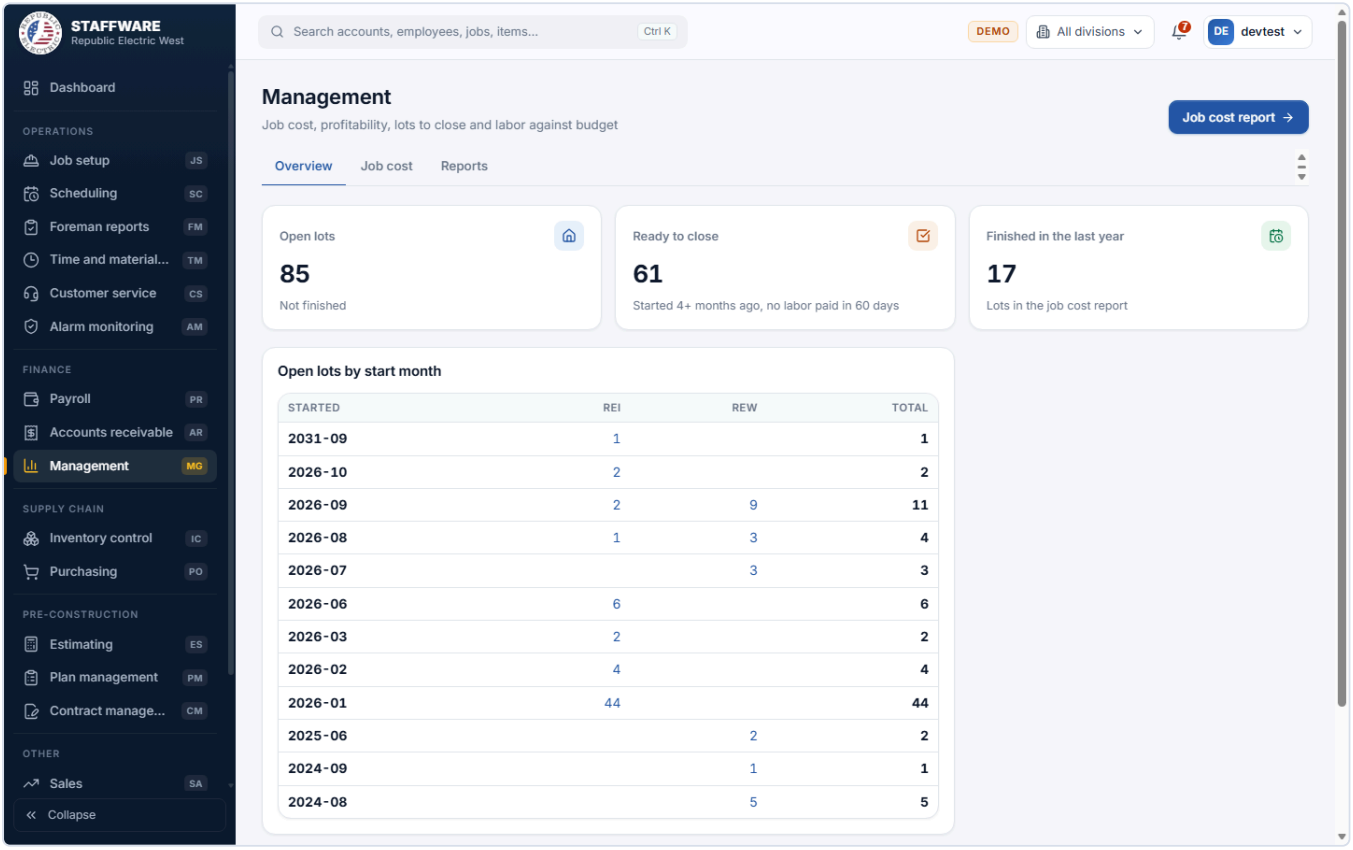

BUTTON	WHERE	WHAT IT DOES	WHAT CHANGES	SAFEGUARDS
Process job cost	Job cost tab	Runs the job cost figures for the chosen dates and filters	Nothing is saved; the screen is refreshed	Dates required, burden 0 to 200

There are no other buttons that change records.

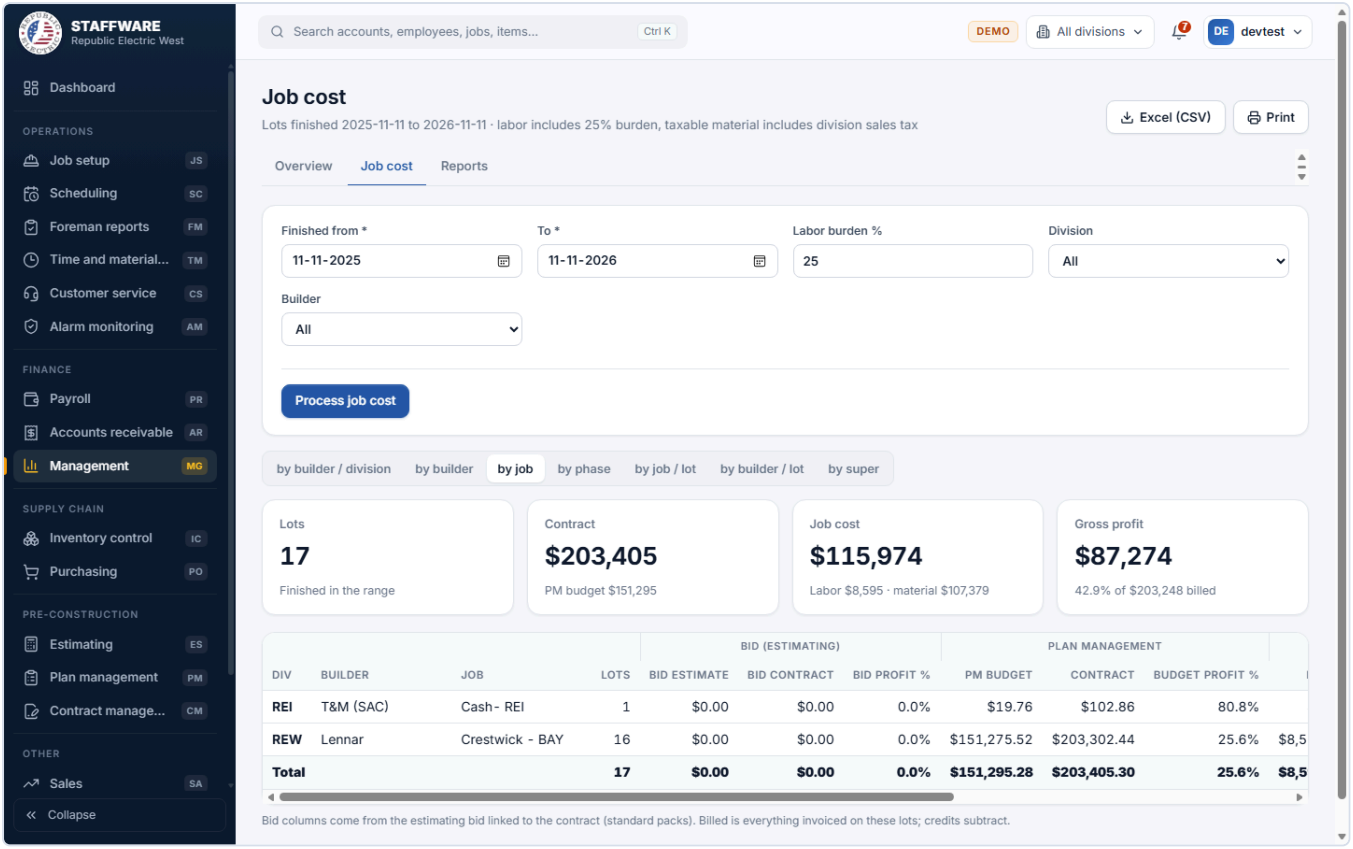

7. A typical day-to-day workflow

1. Open Overview and look at Open lots, Ready to close and the start-month table.
2. Click the "Ready to close" card (or choose "Lots ready to close" on Reports) to see lots with no labor in 60 days; tick "Group by superintendent" to hand each super a list.
3. Open a lot from that list to see "Lot info detail": packs, job cost and billing.
4. At month end open the Job cost tab, set the dates, keep burden at your standard, and press "Process job cost".
5. Switch the grouping (by builder, by job, by phase, by super) to see where profit is made or lost; click a lot row to look closer.
6. Use "Labor paid vs budget - open lots" for one builder to find lots where labor is running over budget.
7. Use "Job cost packs no value" to find packs that were scheduled without a contract value.
8. Export to Excel (CSV) or Print the pages you need for the meeting.

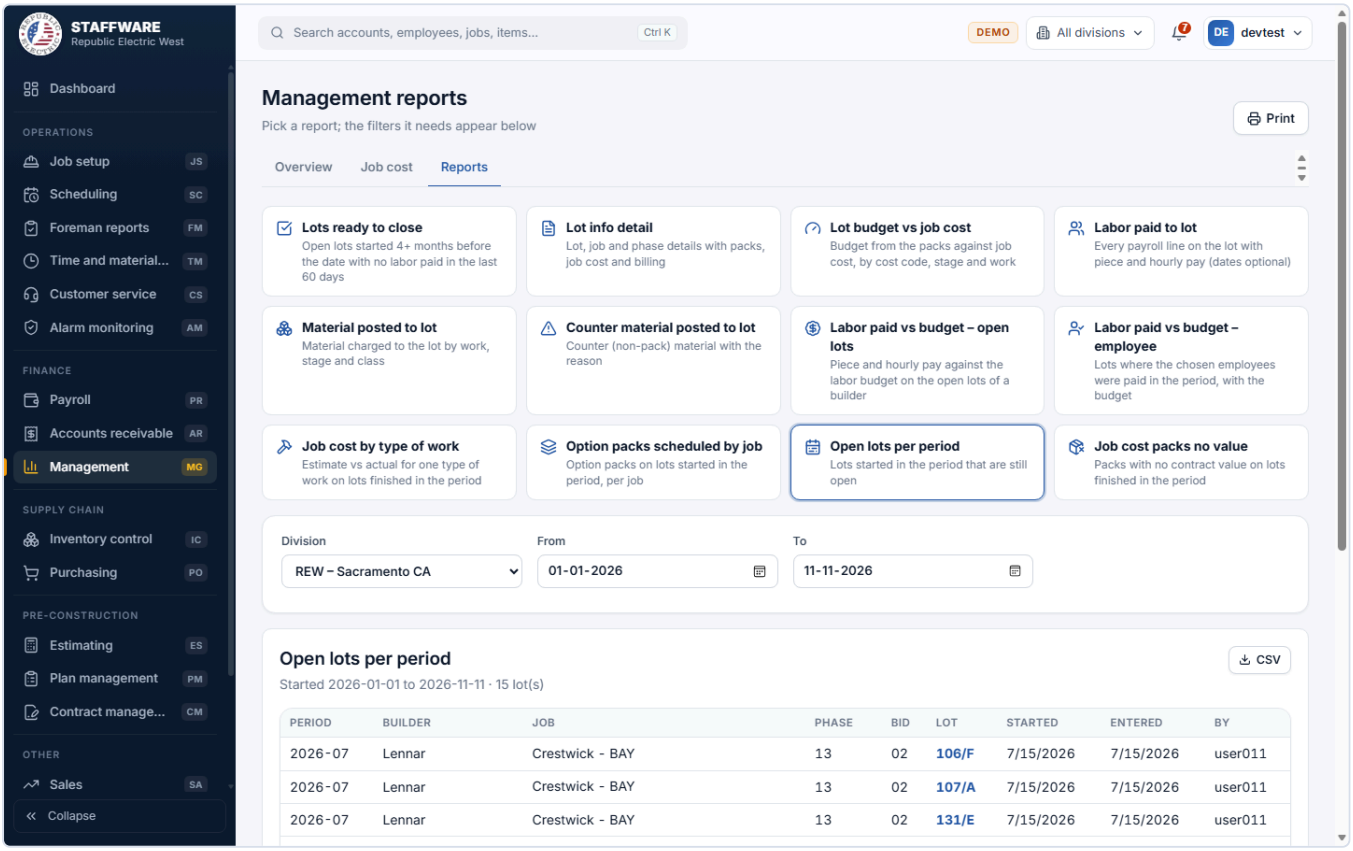

8. Screenshots

Management overview with open lots by start month

Job cost for lots finished in the last year, grouped by job

Report cards with "Open lots per period" chosen and its filters

9. Good to know

- Everything is read-only; Management cannot damage data.
- In Access, "Process job cost info" built temporary tables first. The web app works the figures out live, so results always reflect current data and the button simply refreshes them.

- Job cost covers lots with an end date between From and To. Labor includes the burden percent you choose; taxable material includes the division's sales tax.
- The bid columns come from the estimating bid linked to the contract (standard packs); lots without a bid show zeros there.
- "Billed" is everything invoiced on the lots; credits subtract.
- A lot is "ready to close" when it started four or more months before the date and no labor was paid in the last 60 days.
- Access offered separate switchboard buttons for each job cost grouping; the web app puts them behind the grouping buttons on the Job cost tab.
