Sales (SA)

Sales leads on built homes, and sales reports on estimated sales, billing, options sold and lots closed.

1. What this module is for

Sales has two jobs. First, it keeps a list of sales leads: houses (properties) that may be sold or serviced, with their homeowners, phone numbers, a sale priority and the packs installed on the production lot. Second, it gives sales and management a set of reports built from production, billing and payroll data: estimated sales by plan, billing and contract by lot, options sold, labor paid by stage, lots closed and lots at a stage. Access is controlled per login: only users with the SA permission flag see the module.

2. How it connects to other modules

Needs data from

MODULE	WHAT IT USES	WHY
Job Setup (JS)	Customers, jobs, lots, packs, phases and stages	The packs on a lead's production lot, and the lots, packs and stage dates behind most reports
Plan Management (PM)	Plans, packs, contracts, plan material	Plan numbers and names, contract and billing amounts per pack, and the material cost used in Estimated sales by plan
Accounts Receivable (AR)	Billing items	Billing figures in the sales reports
Payroll (PR)	Labor paid	The Labor paid div & stage report
Inventory Control (IC)	Items	Material cost in Estimated sales by plan
Customer Service (CS)	Properties, homeowners, phones, call notes, tickets and quotes	Leads are stored as the same properties and homeowners that Customer Service uses; the module checks them before a lead is deleted
Database Maintenance (DM)	Divisions, schedule stages, pack types, phone types and sale priorities	Pick-lists on the forms and reports

Feeds data to

MODULE	WHAT IT GIVES	WHEN
Customer Service (CS)	New leads (properties), their homeowners and phone numbers	When a lead, homeowner or phone is saved here, it is immediately a property, homeowner or phone in Customer Service

Where it sits in the work flow

Production lots come from Job Setup and are built, billed and paid through Scheduling, Payroll and Receivables. Sales looks at that finished data: it lists the houses as leads and reports on what was sold and billed. A lead that becomes a service customer carries over to Customer Service with no re-entry.

3. Screens (tabs) in this module

SCREEN / TAB	WHAT IT IS FOR	WHAT YOU CAN DO THERE
Overview	Quick summary	See Sales leads, Hot leads, Leads without a homeowner, Lots started (30 days), latest leads, leads by sale priority, and shortcuts to the reports. Button: New lead
Sales leads	List of leads	Search by address, city, zip, job, builder, lot or homeowner; filter by sale priority (including "No priority"); sort by Address, City, Sale priority, Newest first or Escrow date; page through; New lead; open a lead
Lead (opened from the list)	One lead, two sub-tabs: Property info and Homeowner info	Edit the property, see packs on the production lot, add and change homeowners and their phones; "Go to address" jumps to another lead
Reports	Seven reports	Pick a report, choose its filters, run, print or export

4. How the data entry forms work

Lead (Property info)

- When you use it: to add a house as a sales lead or correct its details.
- Fields:
- Required: Address.
- Optional: Unit, City, State (two letters), Zip (five digits), Escrow date, Lot / block, Notes.
- Pick-lists: Sale priority (1 Hot, 2 Medium, 3 Cold, 4 Do not call, from the sale priority list); Job name is a finder that searches jobs and builders.
- Step by step: Sales leads, New lead (or the New lead button on the Overview). Enter the address and details and click Create lead. To change a lead, open it from the list, edit, and click Save; "Lead saved" appears. Under the form, the "Packs on the production lot" table lists pack type, pack name, quantity, posted quantity and date entered for the lot the lead is tied to; if the lead has no production lot it says so.
- What gets saved: the property record. It shows in Sales leads and Overview, and in Customer Service under Properties.
- Safeguards: if another property already has the same address (and city and unit) you are asked whether to save a second one anyway. State must be two letters and zip five digits. Delete asks for confirmation and removes the homeowner links but keeps the homeowners themselves. A lead cannot be deleted if it is tied to a production lot, or has Customer Service tickets, call notes or quotes.

Homeowner info (on a lead)

- When you use it: to record who owns or is buying the house and how to reach them.
- Fields:
- Required: First name, Last name, Customer type (pick-list shared with Customer Service).
- Optional: Middle name, Email, Notes, Phone number and Phone type (pick-list; defaults to the first type).
- Step by step: open the lead and click the "Homeowner info" tab. Existing homeowners show as panels; change a field and click "Save homeowner". Use "Remove from lead" to unlink them (the homeowner record is kept, after confirmation). Under each homeowner, change a phone number or type and click the save icon, delete one with the bin (confirmation), or type a new number and click Add. To add another person use the "Add homeowner" form at the bottom and click Add homeowner.
- What gets saved: the homeowner, the link to the property, and phones. They appear at once in Customer Service under Homeowners and on the scheduling form.
- Safeguards: email must look like an email, phone numbers must have 10 digits, and the same number and type cannot be added twice to one homeowner. If a homeowner with the same first and last name already exists you are asked whether to add a new one anyway. Adding the homeowner and its link and phone is all-or-nothing.

5. Reports

Click a report button; the filters it needs appear below. Some reports run as soon as the filters are complete. Three reports (Options scheduled-lots, Global options sold, Labor paid div & stage) first list the pack names found and you tick the ones to show, then click Display report; "Change pack selection" returns to the list. Dates default to 1 January of this year to today.

REPORT	WHAT IT SHOWS	FILTERS YOU CHOOSE FIRST	PRINT / EXPORT
Estimated sales by plan	Standard and option billing against cost for each plan, for lots started in the period	Customer (or all), Division, From, To, Labor burden % (starts at 25)	Print, CSV
Billing & contract by lot	Contract, revised contract and billing per lot and pack type, for lots started in the period	Customer, Job, From, To	Print, CSV
Options scheduled-lots	Chosen option packs on the job's lots started in the period	Customer, Job, From, To, then tick packs	Print, CSV
Global options sold	Chosen packs on every lot of the division started in the period	Division, From, To, then tick packs	Print, CSV
Labor paid div & stage	Lots with labor paid at a stage (payroll date in the period), with the chosen packs scheduled	Division, Schedule stage, From, To, then tick packs	Print, CSV
Lots closed by date	Lots whose end date falls in the period	Division, From, To	Print, CSV
Lots stage by date	Lots with a schedule stage delivered in the period	Division, Schedule stage, From, To	Print, CSV

A grey "Sales quotes" button is shown but disabled. It is marked "under construction", as in Access.

6. Action buttons

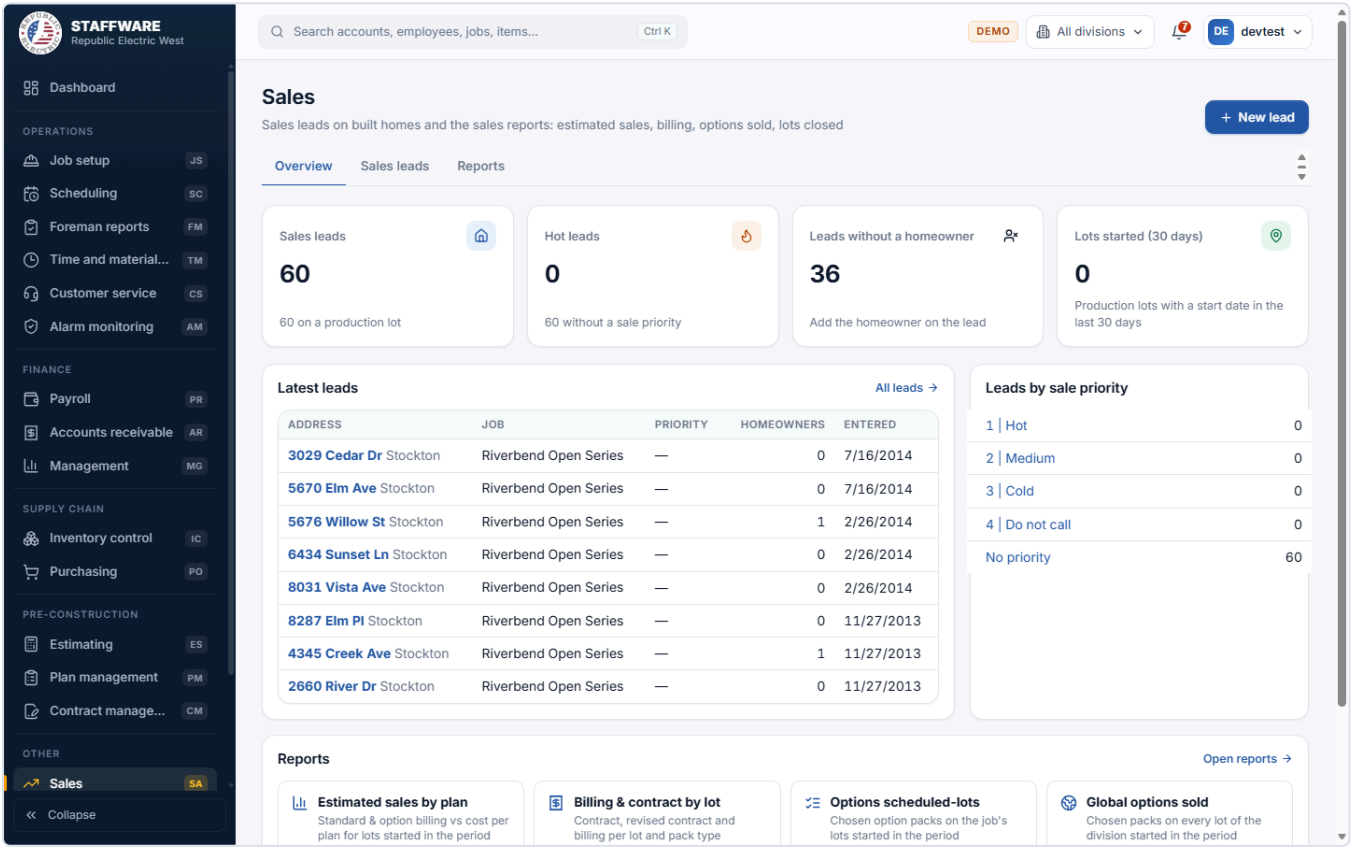

Sales has no processes that post or change many records at once. The buttons that save are the ordinary form buttons described above (Create lead, Save, Save homeowner, Add homeowner, Add phone). Display report only reads data.

BUTTON	WHERE	WHAT IT DOES	WHAT CHANGES	SAFEGUARDS
Display report	Reports (the three pick reports)	Runs the report for the ticked packs	Nothing is changed	At least one pack must be ticked
Delete	Lead page	Deletes the lead	Property and homeowner links removed	Confirmation; refused for lots, tickets, notes or quotes

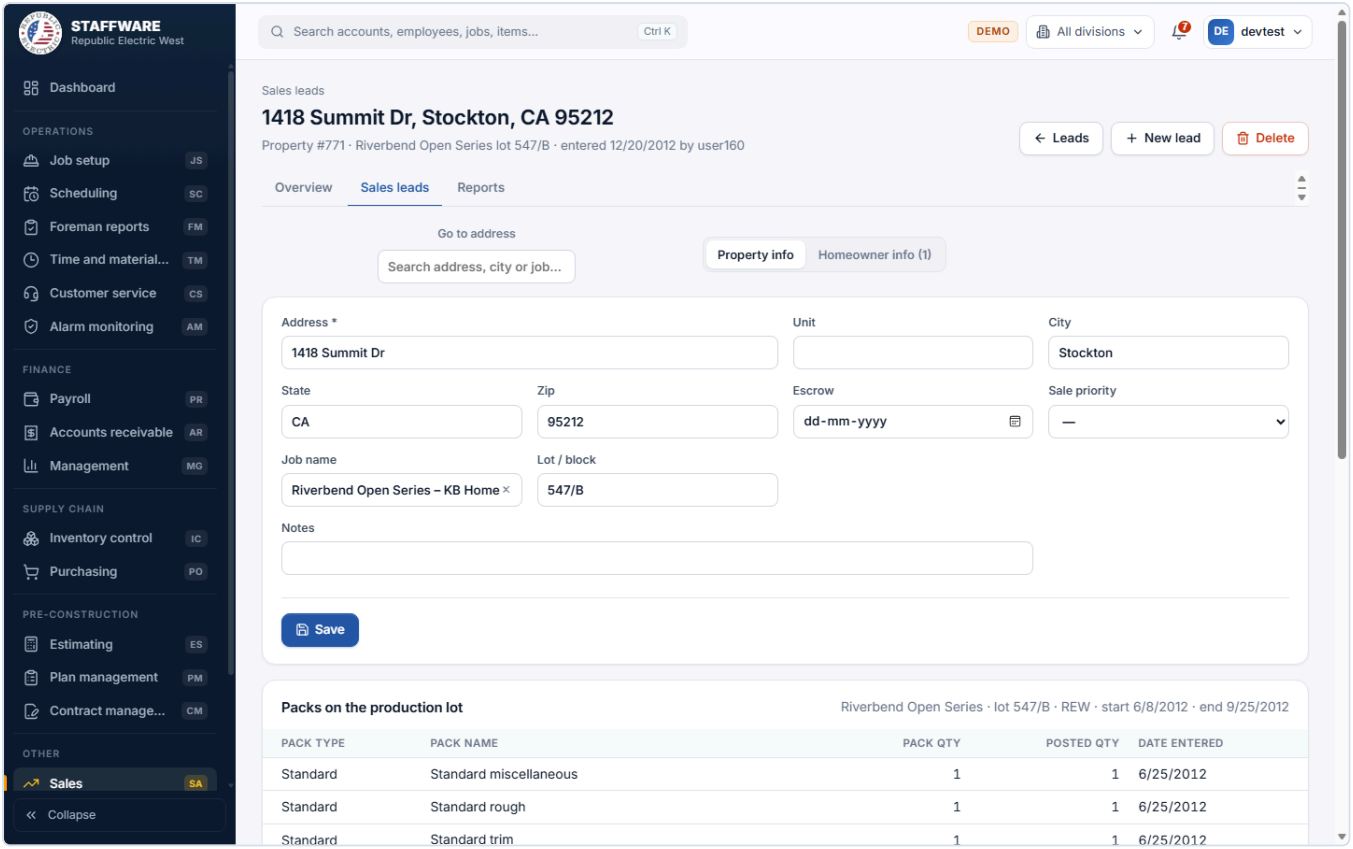

7. A typical day-to-day workflow

1. Open Overview and check hot leads and leads without a homeowner.
2. Open Sales leads, filter by priority or search by address.
3. Open a lead and check the packs installed on its production lot.
4. Set the Sale priority and Escrow date, and click Save.
5. On the Homeowner info tab add the homeowner and phone numbers.
6. Use "Go to address" to jump to the next lead.
7. At month end open Reports, Lots closed by date and Lots stage by date for production status.
8. Run Estimated sales by plan and Billing & contract by lot for the sales and billing review.
9. Run Options scheduled-lots or Global options sold, tick the packs of interest, and print the result.

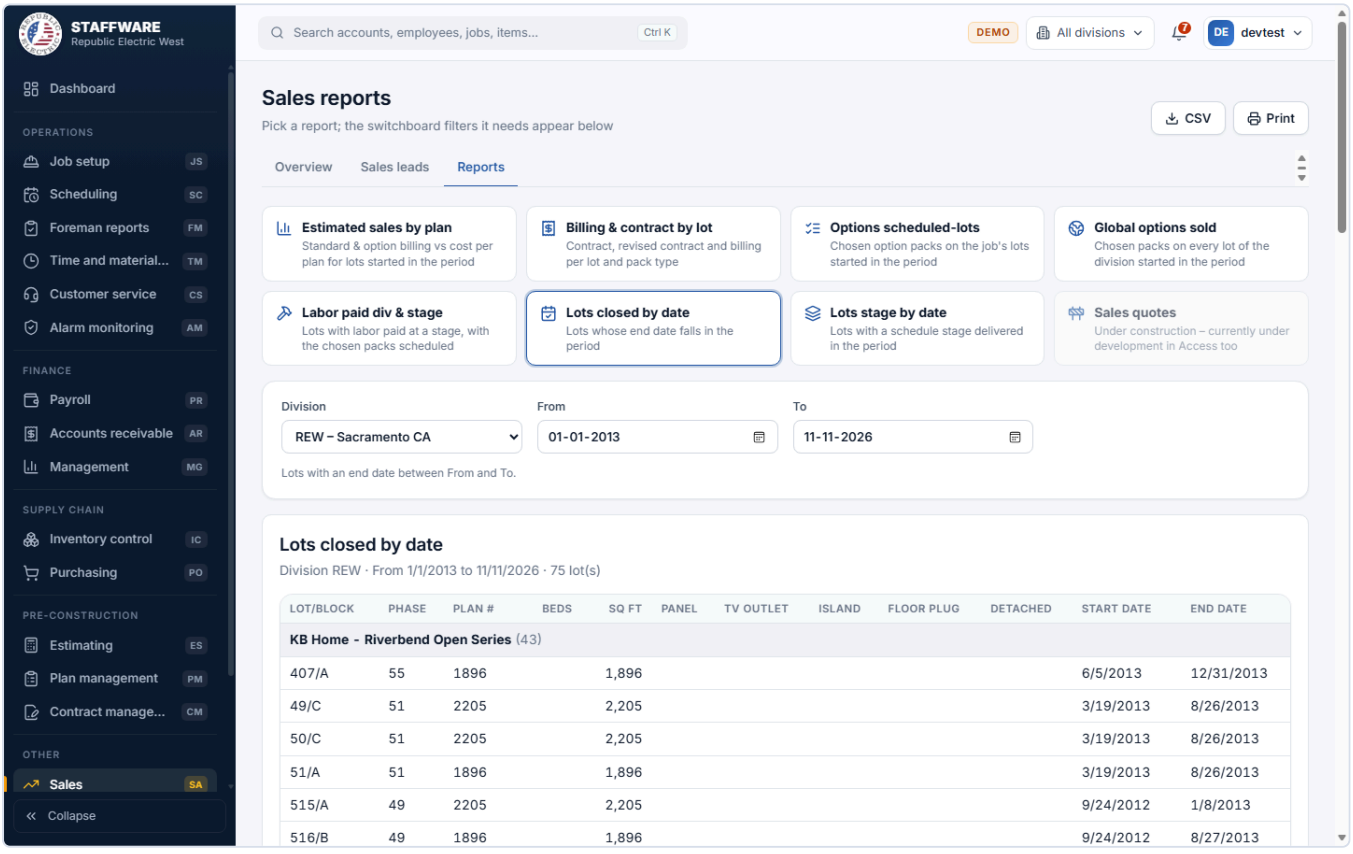

8. Screenshots

Sales overview with lead counts, latest leads and report shortcuts

A sales lead: property details and packs on the production lot

Sales reports: Lots closed by date for division REW

9. Good to know

- Leads are not a separate list: they are Customer Service properties and homeowners. This avoids double entry but means a change in one module shows in the other.
- Leads are tied to production lots by Customer Service ("Add production jobs / lots"), not created from the Sales screen; a lead made here has no lot until it is linked there.

- "Sales quotes" is not built. It was also unfinished in Access.
- Sale priority is empty on all test leads, so Hot leads shows zero in the screenshots.
- Estimated sales by plan only includes lots whose plan, bid and contract are set up; lots missing that data do not appear.
- Reports only show data that exists in the database; the figures in the screenshots are test data.
